

4.1 Working with Variables (Arithmetic operations)

Addition: → We create sequence and go to assign in this way.
We also create variables But in the case, we use input dialog and declare the variable.

→ We get the output on main desktop.

Subtraction:

- We create sequence first then we go to the input dialog and declare the variables with help of control and K.
- The integer (marks) in integer type and name should be in string data-type.
